NOTES

Installation instructions:

The converters have to be installed according to the guidelines currently in force, like other open electronic component assemblies. Attention must be paid to sufficient ventilation, carry off heat, fastening and protection against accidental contact. Additional thermal conductive pad might be necessary to get a thermal coupling to the mounting-surface. The mounting surface must be flat and able to remove the thermal energy of the PCB (Baseplate must not exceed $+90\text{ °C}$).

The connection to earth/chassis ground has to be done by the 4 outer mounting holes (protective earth for version G) and the pin 6 PE ( / ).

Fault protection: The converters are equipped with a soldered-in time-lag fuse corresponding to IEC 60127-2 for input protection. In case at fault the supplying current source must be capable to blow the fuse.

Caution for HFBCx0-W/O or HFBCx0-W/OL:

1. No protection against touching, dangerous voltage
2. After power off, wait 10 s before disconnecting or touching

THERMAL PADS

For HFBC100-W/O or/OL and output with 5.1 V

For HFBC30-W/O or/OL and HFBC50-W/O or/OL

Recommendation: Soft gap-pads with a thermal conductivity of $>2,5 \text{ W/mK}$, example: HALA TGF-MSS4000-Si or similar

DESCRIPTION OF FEATURES

PARALLEL OPERATION

Module of the same output voltage can be connected in parallel operation.

Connection signal TR should be as short as possible (max. 20 cm).
When not use parallel operation, leave Tracking pin not-connected.
A version with parallel operation is available on request.

REDUNDANT OPERATION

Module of the same output voltage can be connected in redundant operation.

By redundant operation Signal TR must be not connected.
A version with redundant operation is available on request.
